The rapid spread of the corona virus infectivity has raised concerns over surface-to-humans transmissions, including through currency notes. This increases the panic level of spread of micro-organisms through the currency notes circulation which leads to the spread of diseases like COVID-19. The currency note may act as the carrier of these dreadful diseases which needs engineering solution to avoid this problem.</p> <p>No. of Pages : 8 No. of Claims : 6</p>

(57) Abstract :
 Nowadays there is a situation in which electrical consumption plays a major role in everyone's day -to-day life. Hence steps must be taken to handle this situation, which may be either minimizing the power consumption (or) finding new sources to generate power. But in present situation, it is very difficult to reduce the consumption of power. Thus the only way is to recycle power from new sources. In this invention, we have proposed one way to recycle the power that can be used as some alternative energy sources for your home or for your community
